PROFESSIONAL SUMMARY

.NET Backend Developer specializing in C#, ASP.NET Core Web API, SQL Server, and ADO.NET. Experienced in building database-driven REST APIs with layered architecture, JWT authentication, refresh-token rotation, authorization, transactions, and concurrency control. Built a reusable schema-driven code generation platform that automates ASP.NET Core backend scaffolding from SQL Server metadata, reducing repetitive development from days to hours and reused across hospital, ERP, and accounting systems.

EXPERIENCE

Freelance .NET Backend Developer — Accounting & Inventory Management System

June 2026 – July 2026

ASP.NET Core Web API · C# · SQL Server · ADO.NET · Electron · React

- Designed and developed the backend with 8 SQL Server tables, 35 stored procedures, 9 scalar functions, 9 controllers, and 34 REST endpoints covering invoicing, inventory, expenses, sales, returns, and reporting.
- Implemented atomic multi-line invoicing using SQL Server Table-Valued Parameters (TVPs) and focused manual development on financial reporting and bulk-processing workflows.
- Used a self-built schema-driven code generation engine to accelerate CRUD development and integrated the API with an offline-capable Electron client using hardware-ID licensing.

PROJECTS

Schema-Driven Backend Code Generation Platform

2025 – 2026

C# · ASP.NET Core · SQL Server · ADO.NET · PowerShell

- Built a metadata-driven generator that converts SQL Server tables and custom queries into complete ASP.NET Core CRUD backends, including DTOs, asynchronous ADO.NET data access, services, controllers, stored procedures, and React entity configurations.
- Applied the Builder Pattern with configurable column roles such as key, foreign key, lookup, update, and search to drive generated naming, routing, validation, and CRUD behavior.
- Created idempotent PowerShell installers for project scaffolding, .csproj registration, and SQL deployment, reducing repetitive backend scaffolding from days to hours.
- Reused the platform across the Hospital Management System, Aluminum Production ERP, and Accounting & Inventory Management System.

Hospital Management System

Nov 2025 – Sep 2026

ASP.NET Core Web API · C# · SQL Server · ADO.NET · React

- Designed a normalized 24-table SQL Server database with 26 foreign keys, 22 CHECK constraints, and 133 stored procedures supporting clinical, scheduling, billing, and administrative workflows.
- Built a layered REST API with 24 controllers and 127 endpoints using Controller → Service → DAL architecture and asynchronous ADO.NET.
- Implemented JWT authentication, atomic refresh-token rotation, BCrypt password hashing, audit logging, and custom bitmask authorization supporting up to 128 permissions.

- Implemented critical T-SQL business rules including appointment conflict detection, role exclusivity, invoice uniqueness, and balance-validated payments.

Aluminum Production ERP

Aug 2026

ASP.NET Core Web API · C# · SQL Server · ADO.NET · React

- Developed an 18-controller, 63-endpoint REST API for a multi-stage Cutting → Coloring → Packaging manufacturing workflow using 12 SQL Server tables and 62 stored procedures.
- Enforced production stage-flow and waste-handling rules in T-SQL and implemented transaction-based concurrency control using UPDLOCK/HOLDLOCK.
- Implemented JWT authentication and bitmask authorization supporting 43 permissions, with structured SQL error codes mapped to API responses.

DVLD Management System

Jun 2025 – Aug 2025

C# · .NET Framework · WinForms · ADO.NET · SQL Server · T-SQL

- Developed a three-tier desktop application with 12 Business Layer classes, 12 Data Access Layer classes, and 44 reusable WinForms components across 14 relational tables.
- Implemented parameterized ADO.NET access and centralized business validation for driver registration, licensing, renewals, replacements, testing, and detention workflows.

TECHNICAL SKILLS

Backend: C# · ASP.NET Core Web API · RESTful APIs · Layered Architecture · Controller–Service–DAL · Async/Await · CancellationToken

Database: SQL Server · T-SQL · ADO.NET · Stored Procedures · Table-Valued Parameters (TVPs) · User-Defined Functions · Transactions · Concurrency Control · Relational Database Design

Security: JWT Authentication · Refresh Token Rotation · Bitmask Authorization · Custom Authorization Policies · BCrypt · Parameterized Queries · CORS · HTTPS · Audit Logging

Engineering: Metadata-Driven Code Generation · Builder Pattern · PowerShell · Backend Scaffolding

Tools: Git · GitHub · Swagger · Visual Studio · React · Electron · WinForms

Programming: C++ · OOP · Data Structures & Algorithms · Problem Solving

EDUCATION

Information Engineering

International University for Science and Technology (IUST)

Training & Courses

Programming Advices — Completed 23 courses in programming and software development.

LANGUAGES

Arabic: Native | **English:** Intermediate (B1–B2)
